

Introduction to Python II (Exercises 07)

- 1) Watch the video `simple_game` (in your exercises folder). Your task is to write a script that duplicates the game as shown in the video.

For that you will use all the classes we created in class 07. All the class definitions are found in the file `pythoncards.py` (It is found in your exercises folder). Copy that file to your working directory.

You will start your script by creating a new file and importing the classes as follows:

```
import pythoncards as pc
```

After importing the Python Cards Classes, you are ready to start. Good programming!
